Nature Catalysis will bring together researchers from across all chemistry and related fields, publishing work on homogeneous catalysis, heterogeneous catalysis, and biocatalysts, incorporating both fundamental and applied studies. The journal will have a particular interest in applied work that advances our knowledge and informs the development of sustainable industries and processes.

As such, *Nature Catalysis* will provide essential coverage of the science and business of catalysis research, creating a unique journal for scientists, engineers and researchers in academia and industry.

New journals from Nature Research in 2018

Nature Electronics will publish both fundamental and applied research across all areas of electronics, from the study of novel phenomena and devices, to the design, construction and wider application of electronic circuits. It will also cover commercial and industrial aspects of electronics research. At its core, the journal will be concerned with the development of new technologies and understanding the impact of these developments on society.

www.nature.com/natelectron

Nature Sustainability is a new online-only journal that will publish significant original research from a broad range of natural, social and engineering fields about sustainability, its policy dimensions and possible solutions. Understanding how to ensure human life will thrive within the biophysical limits of the planet is the overarching goal of sustainability research.

Part of the journal's mission is to facilitate a cross-disciplinary dialogue around sustainability issues, and narrow the gap between research and policy making to ensure the real-world impact of research.

When the solar irradiance propagates between the outer magnetospheric regions and the ionosphere, dynamic processes of the magnetosphere-ionosphere-thermosphere system are affected at the lower end of their paths by the interaction of radiation with the neutral troposphere. The main target of this work is to investigate the relationship between the diurnal magnetic field variations resulting from solar activities and the variation in the troposphere

Aims & Scope :

As an international key journal on scientific space research, its purpose is to provide a comprehensive synthesis of the various branches of space research. The emphasis is on scientific results and instruments in the fields of astrophysics, physics of planetary systems, solar physics, and physics of magnetospheres & interplanetary matter. Space Science Reviews publishes invited papers and topical volumes, engaging guest editors whose expertise matches the topic at hand. Commonly used title ab

Dear Dr Lippman,

Имя редактора

Название работы

Please find enclosed our manuscript entitled "Evaluation of the Glasgow prognostic score in patients undergoing curative resection for breast cancer liver metastases," which we would like to submit for publication as an Original Article in the *Breast Cancer Research and Treatment*.

Тип статьи

The Glasgow prognostic score (GPS) is of value for a variety of tumours. Several studies have investigated the prognostic value of the GPS in patients with metastatic breast cancer, but few studies have performed such an investigation for patients undergoing liver resection for liver metastases. Furthermore, there are currently no studies that have examined the prognostic value of the modified GPS (mGPS) in these patients. The present study evaluated the mGPS in terms of its prognostic value for postoperative death in patients undergoing liver resection for breast cancer liver metastases.

Дать
информацию
об
исследовании

A total of 318 patients with breast cancer liver metastases who underwent hepatectomy over a 15-year period were included in this study. The mGPS was calculated based on the levels of C-reactive protein and albumin, and the disease-free survival and cancer-specific survival rates were evaluated in relation to the mGPS. Prognostic significance was retrospectively analyzed by univariate and multivariate analyses. Overall, the results showed a significant association between cancer-specific survival and the mGPS and carcinoembryonic antigen level, and a higher mGPS was associated with increased aggressiveness of liver recurrence and poorer survival in these patients.

Описать что
было сделано
и результаты

This study is the first to demonstrate that the preoperative mGPS, a simple clinical tool, is a useful prognostic factor for postoperative survival in patients undergoing curative resection for breast cancer liver metastases. This information is immediately clinically applicable for oncologists treating such patients. As a premier journal covering the broad field of cancer, we believe that the *Breast Cancer Research and Treatment* is the perfect platform from which to share our results with the international medical community.

Комментарий рецензента: In your analysis of the data you have chosen to use a somewhat obscure fitting function (regression). In my opinion, a simple Gaussian function would have sufficed. Moreover, the results would be more instructive and easier to compare to previous results.

Согласие

Ответ: We agree with the reviewer's assessment of the analysis. Our tailored function form, makes it difficult to tell that this measurement constitutes a significant improvement over previously reported values. We describe our new analysis using a Gaussian fitting in our revised Results section (Page 6, Lines 12–18)

Несогласие с рецензентами

Как делать нельзя:

Комментарий рецензента: In your analysis of the data you have chosen to use a somewhat obscure fitting function (regression). In my opinion, a simple Gaussian function would have sufficed. Moreover, the results would be more instructive and easier to compare to previous results.

ОТВЕТ: It is clear that this reviewer is not familiar with the current analytical methods in the field. I recommend that you identify a more suitable reviewer for my manuscript.

Несогласие с рецензентами допустимо в вежливой форме:

Комментарий рецензентов: In your analysis of the data you have chosen to use a somewhat obscure fitting function (regression). In my opinion, a simple Gaussian function would have sufficed. Moreover, the results would be more instructive and easier to compare to previous results.

Доводы

Ответ: Although a simple Gaussian fit would facilitate comparison with the results of other studies, our tailored function ~~allows for the analysis of the data in terms of the Smith model [Robens et al., 2012]~~. We have now explained the use of this function and the Smith model in our revised Discussion section (Page 12, Lines 2–6).

Общая информация

Numerous systemic treatment options exist for patients with mycosis fungoides (MF) and Sézary syndrome (SS); however, the comparative efficacy of these treatments is unclear.

Методы/цели

We performed a retrospective analysis of our cutaneous lymphoma database to evaluate the treatment efficacy of 198 MF/SS patients undergoing systemic therapies. The primary end point was time to next treatment (TTNT). Patients with advanced-stage disease made up 53%. The median follow-up time from diagnosis for all alive patients was 4.9 years (range 0.3–39.6), with a median survival of 11.4 years. Patients received a median of 3 lines of therapy (range 1–13), resulting in 709 treatment episodes. Twenty-eight treatment modalities were analyzed.

Результаты

We found that the median TTNT for single- or multiagent chemotherapy was only 3.9 months (95% confidence interval [CI] 3.2–5.1), with few durable remissions. α -interferon gave a median TTNT of 8.7 months (95% CI 6.0–18.0), and histone deacetylase inhibitors (HDACi) gave a median TTNT of 4.5 months (95% CI 4.0–6.1). When compared directly with chemotherapy, interferon and HDACi both had greater TTNT ($P < .00001$ and $P = .01$, respectively).

Заключение

In conclusion, this study confirms that all chemotherapy regimens assessed have very modest efficacy; we recommend their use be restricted until other options are exhausted.

Modified from: Canney et al. Blood. 2015; 125: 229–235.
